Clutch Your Tiller

No, not with your hand, with the TillerClutch™ - an innovative, convenient and safe way to "lash" your tiller. Mounted underneath your tiller, the lever operates a specialized rope clutch that engages a small control line attached aft across the cockpit. You can work the lever to securely grip or fully release the control line with one hand. The TillerClutch is not an automated boat steering machine or autopilot, it's an "extra hand" to secure the helm while you do other tasks, and also to take off some of the steering load in heavy weather. For more info go to www.wavefrontmarine.com.
